

## Dr. Ron Dillow

**Q: My lower denture is very difficult for me to wear. It is loose and flips around when I try to eat. Is this normal?**

**A:** Many patients are challenged by a lower denture. The natural movement of the lower

# Ask The Dentist

jaw and the tongue can dislodge the denture.

But there is a simple solution to the problem.

We can now make lower dentures than snap in place and will not move during chewing and speech. This is accomplished in only one or two visits and many times we can use your existing denture.

The many patients we have helped with this say

they wished they had done it sooner. Here at **TODAY'S DENTAL CARE** the focus is on you, your health and your comfort. If you are having dental problems or questions, please call **345-8333 now** to reserve a **complimentary consultation** with Dr. Dillow.
